We Build SEO Linkable Assets

Create Linkable Assets That People Actually Want to Cite

We research, design, and produce data-backed linkable assets that help brands earn natural backlinks, build topical authority, and get cited by AI models like ChatGPT and Perplexity.

[Try Linkable Asset →]

Linkable Asset Performance • Live

Metric	Result
Backlinks earned	312
Media mentions	89
AI citations	24

Who cites our work:

- Journalists — 78%
- Bloggers — 54%
- AI Models — 38%
- Academics — 22%

Perplexity cited your study

As seen in: Search Engine Journal, Forbes, TechCrunch, HubSpot, Moz Blog, Ahrefs

What Is Linkable Asset Building?

Data That Earns Authority

Linkable asset building is the practice of creating original research, studies, and data-driven content that journalists, bloggers, and AI systems naturally want to cite. Instead of asking for links, you earn them by publishing something genuinely worth referencing.

Every linkable asset we build is backed by real data — surveys, industry studies, and first-party research — so when publications cover your niche, they cite your work instead of a competitor's. That means backlinks at scale, without cold outreach or link exchanges.

🏆 Our linkable assets have been cited by leading publications including Search Engine Journal, Forbes, and TechCrunch — bringing sustained, high-authority backlinks to our clients.

The Numbers Behind the Method

Stat	What It Means
8.4×	More links per piece vs. standard content
73%	Of linkable assets earn media coverage within 30 days
DR 60+	Average domain rating of linking sites
3×	AI citation rate vs. standard blog posts

Why Linkable Assets Outperform Traditional Link Building

Most link building relies on outreach — pitching guest posts, trading links, or paying for placements. It's slow, it doesn't scale, and the links rarely hold up under scrutiny from Google or from AI crawlers evaluating source credibility.

Linkable assets flip that model. Because the content is original data — not repackaged opinion — it becomes something writers cite on their own, often years after publication. This is also why linkable assets tend to perform well for **E-E-A-T** (Experience, Expertise, Authoritativeness, Trustworthiness): original research signals real expertise in a way that generic articles can't.

How they compare:

Traditional Link Building

Linkable Asset Building

Method	Outreach, guest posts, exchanges	Original research earns citations
Scalability	Limited by outreach capacity	Compounds over time
Link quality	Variable, often low-authority	Typically DR 60+
AI citation potential	Low	High — structured for LLM indexing
Longevity	Links often decay	Assets can earn links for years

Our Linkable Asset Building Service

From research ideation to publication to link monitoring — one complete linkable asset building system.

Opportunity Research

We analyze backlink patterns, search demand, and publisher behavior to identify topics already attracting authoritative editorial citations.

Strategic Asset Planning

We develop unique data-driven concepts aligned with audience interests, search intent, and proven link acquisition opportunities across industries.

Research & Data Collection

Our team gathers credible data, proprietary insights, and supporting information necessary to build trustworthy, citation-worthy content assets.

Asset Production & Design

Writers, analysts, and designers collaborate to create visually compelling assets structured for readability, authority, and natural shareability online.

SEO Structuring & Optimization

Every asset is optimized for organic search visibility, topical relevance, internal linking, indexing, and long-term ranking performance.

Media Amplification

In partnership with Media by Verge, we distribute assets to over 5,000 journalists, publishers, editors, and industry reporters.

The Compounding Linkable Asset System

Each linkable asset you publish builds on the last. Annual data refreshes keep old studies earning new citations and backlinks for years after publication.

1. **Identify research gaps** — Find unclaimed data your industry cites but no one has actually verified.
2. **Build the linkable asset** — Survey, scrape, or analyze to produce original, citable findings.
3. **Publish & amplify** — Format for AI indexing, pitch journalists, seed across channels.
4. **Compound over time** — Refresh data annually and watch backlinks regenerate organically.

Average linkable asset lifespan: 4.2 years of active link earning.

Who Linkable Asset Building Is Right For

Linkable assets work best for brands that already have something to say in their space but haven't turned it into data — B2B SaaS companies sitting on usage data, e-commerce brands with purchasing trend insight, or service businesses with industry knowledge no one has quantified yet.

It's a strong fit if:

- Your niche regularly gets covered by trade press or mainstream media
- You have (or can access) data that hasn't been publicly analyzed
- You're trying to build topical authority around a specific subject, not just rank for one keyword
- You want backlinks that hold up over time, not a short-term spike

It's a weaker fit if you need links this week — linkable assets are a compounding strategy, not a quick patch.

Works Across Any Niche

B2B SaaS, e-commerce, finance, health, travel — if your industry cites statistics, a linkable asset can own them.

Related Concepts We Work With

Linkable asset building sits alongside — and strengthens — several other parts of a modern SEO and digital PR strategy:

- **Digital PR** — pitching original stories and data to journalists and publications
 - **Original research and data journalism** — surveys, scraped datasets, and first-party studies
 - **Topical authority** — building depth around a subject so search engines and AI models treat you as a trusted source
 - **AI citation optimization** — structuring content so tools like ChatGPT, Perplexity, and Google AI Overviews surface and credit your data
 - **Evergreen content** — assets designed to stay relevant and link-worthy well past their publish date
 - **Authority building** — the broader practice of establishing a domain as a credible reference point in its niche

Frequently Asked Questions

What exactly is a linkable asset?

A linkable asset is a piece of content — usually built around original data, a study, or a survey — that other websites want to reference and link to on their own, without you having to ask. Think industry reports, proprietary surveys, or first-of-their-kind data analyses.

How is linkable asset building different from regular link building?

Regular link building usually involves outreach: pitching guest posts, requesting links, or trading placements. Linkable asset building removes the "ask" — you publish something genuinely useful or novel, and writers cite it because it helps their own content, not because you requested a link.

How long does it take to see results?

Most clients start seeing media coverage and backlinks within 30 days of publication, based on our average across projects. That said, linkable assets are a compounding asset — the biggest

returns usually show up over the following 12 to 24 months as the data gets picked up by more publications and, increasingly, cited by AI tools.

Do I need my own data, or can you help me find it?

Either works. If you already have internal data (usage stats, customer trends, proprietary research), we can turn that into a citable asset. If not, our research team can design a survey, analyze public datasets, or commission original research from scratch.

Can linkable assets help with AI citations in tools like ChatGPT or Perplexity?

Yes — this is a growing part of what we do. We structure data and attribution clearly (clean formatting, clear sourcing, machine-readable structure) so that when AI models pull facts to answer a query, your asset is a strong candidate to be cited as the source.

What types of research make the best linkable assets?

Original surveys, analysis of existing public datasets from a new angle, and internal company data made public (with permission) tend to perform best. The common thread is novelty — the data needs to say something that hasn't already been published elsewhere.

Will this replace my other SEO or content work?

No — linkable asset building works best as one part of a broader strategy. It's especially effective alongside ongoing content marketing and digital PR, since the asset gives your outreach team something genuinely newsworthy to pitch.

How many businesses do you currently work with?

We currently work with 20+ businesses across industries including B2B SaaS, e-commerce, finance, health, and travel.

What's included if I sign up?

Every engagement covers the full system: opportunity research, strategic planning, data collection, asset production and design, SEO structuring, and media amplification through our partnership with Media by Verge.
