

Monthly SEO Activity Report – August 2026

Prepared by: Arowojebe Sherifdeen A. (Jebson)

Role: SEO Specialist

Company: Verge Digital

Reporting Period: August 2026

1. Overview

During August, my main focus was on improving the organic search performance of **Pinnacle Behavioral Healthcare** (pinnaclebhc.com) through on-page and technical SEO activities. I also continued the regular monitoring and optimization of **Linkable Asset** (linkableasset.com), which is one of my ongoing responsibilities at Verge Digital.

My work this month focused mainly on monitoring search performance, identifying SEO issues, improving existing pages, supporting indexing, and conducting keyword research that could be turned into useful website content.

2. Pinnacle Behavioral Healthcare

On-Page SEO

The majority of my work this month was carried out on Pinnacle Behavioral Healthcare's website, which has over 51 pages, including five key service pages.

I worked mainly on on-page optimization across the website, reviewing existing pages and looking for opportunities to improve their ability to perform in organic search. This involved assessing page content, keywords, page structure, and other on-page elements that can affect search visibility and user experience.

I also focused on the five main service pages, ensuring that their content and SEO elements were properly aligned with the services being offered and the search terms potential patients may use.

Google Search Console Monitoring

I monitored the website's performance in Google Search Console (GSC) on a daily basis. This allowed me to track changes in clicks, impressions, CTR, and average position and to identify areas that needed further attention.

When I started working on the task, the website's reported performance was approximately:

- **Total clicks:** 1.37K
- **Impressions:** 93.2K
- **CTR:** 1.5%
- **Average position:** 16.3

The latest figures I recorded are:

- **Total clicks:** 1.37K
- **Impressions:** 98.4K
- **CTR:** 1.4%
- **Average position:** 22.8

The increase in impressions from **93.2K to 98.4K** shows that the website has continued to appear in search results at a higher overall volume. However, the decrease in CTR and the movement in average position also show that there is still room for improvement, particularly in ranking positions and search-result engagement.

I have therefore treated the GSC data as an ongoing performance indicator rather than looking at individual increases in isolation.

Technical SEO and Indexing

I also carried out technical SEO activities through Google Search Console. This included checking the website's indexing status, crawlability, and other search visibility issues.

Where necessary, I inspected individual URLs and used GSC's URL Inspection tools to understand how Google was handling them. I also:

- Inspected URLs that were not performing as expected.
- Put affected URLs through live testing where necessary.
- Submitted URLs for indexing through Google Search Console.
- Monitored indexing progress after making changes.
- Used GSC data to identify potential technical issues that could affect organic visibility.

These activities helped me maintain a closer view of how Google's systems were accessing and processing the website.

3. Linkable Asset

Alongside Pinnacle Behavioral Healthcare, I continued working on **Linkable Asset**, which is my default website assignment at Verge Digitals.

I monitored its performance and growth through Google Search Console on a regular basis. This allowed me to keep track of how the website was performing in search and identify areas where further optimization could be useful.

Keyword Research and Content Development

I also conducted keyword research for Linkable Asset during the month. The research was used to identify relevant search opportunities and topics that could support the website's organic growth.

Based on the research, I was able to develop and write content for the website earlier in the month. The goal was to target relevant search queries while providing content that was useful to the intended audience.

This gave the keyword research a practical purpose beyond simply collecting keywords, as the findings were used directly to guide content creation and further SEO work on the website.

4. Key Activities Completed

Throughout the month, my main SEO activities included:

- On-page SEO optimization for Pinnacle Behavioral Healthcare.
- Optimization works across 51+ website pages.
- Focused work on five primary service pages.
- Daily Google Search Console performance monitoring.
- Technical SEO checks through Google Search Console.
- Indexing and crawlability monitoring.
- URL inspection and live testing.
- Submitting URLs for indexing.
- Monitoring indexing progress after changes.
- Regular performance monitoring for Linkable Asset.
- Keyword research for Linkable Asset.
- Using keyword research to develop and write website content.

5. Conclusion

August was largely focused on hands-on SEO execution and continuous monitoring. My work on Pinnacle Behavioral Healthcare involved both on-page optimization and technical SEO, with Google Search Console serving as an important tool for monitoring performance and identifying issues.

The website has recorded an increase in impressions from **93.2K to 98.4K** during the period I have been working on it. At the same time, the movement in CTR and average position shows

that the work is still ongoing and that further optimization will be needed to turn increased search visibility into stronger rankings and more clicks.

For Linkable Asset, I continued the regular performance monitoring expected of my role while also carrying out keyword research and using the findings to create new content.

Overall, the month gave me further practical experience in managing on-page SEO, technical SEO, Google Search Console, indexing, keyword research, content development, and ongoing organic search performance analysis.
