SEO Roadmap

LinkableAsset.com

Prepared by JebsonSEO | July 2026

Overview

LinkableAsset.com positions itself as a link building and digital PR agency, but the website doesn't yet fully reflect that expertise. It currently lacks a blog, dedicated case studies, and original content that can naturally attract backlinks. There's also a similarly named competitor, AssetLinkable, creating potential brand confusion in search results. This roadmap starts by strengthening the site's technical foundation, then expands into dedicated service pages, proof-of-work content, and original research to build authority, earn high-quality backlinks, and establish a stronger brand identity. Progress will be tracked monthly using the KPIs outlined below.

Technical SEO

These focus on crawlability, indexing, site structure, and search engine accessibility.

- Confirm all key pages are crawlable and not dependent on JavaScript for critical content.
- Create and submit an XML sitemap.
- Create and configure a robots.txt file.
- Submit the sitemap to Google Search Console.
- Fix broken internal footer links (Privacy Policy, Terms, Blog, Contact).
- Add Organization Schema.
- Add FAQPage Schema.
- Review and implement canonical tags.
- Resolve crawl and indexing errors in Google Search Console.
- Ensure structured data passes Google's Rich Results Test.
- Ensure all core pages are indexed.
- Monitor indexed pages as a KPI.
- Monitor Core Web Vitals.

On-Page SEO

These involve content creation, keyword targeting, internal optimization, and user experience.

- Create dedicated landing pages for each service.
 - Keep the homepage focused as the main topic hub.
 - Link naturally from the homepage to service pages.
 - Write unique title tags for every page.
 - Write unique meta descriptions.
 - Match each page to a specific search intent.
 - Prevent keyword cannibalization.
 - Turn projects into detailed case studies.
 - Launch an Insights/Blog section.
 - Publish 4–6 SEO-focused blog articles.
 - Strengthen internal linking between blogs, case studies, and service pages.
 - Publish original research reports and data-led content.
 - Repurpose content into social posts, visual assets, and newsletters.
 - Monitor organic traffic, CTR, keyword rankings, and leads generated from organic search.
-

Off-Page SEO

These focus on authority building, backlinks, brand mentions, and external visibility.

- Promote original research through outreach to journalists.
- Conduct outreach to bloggers and industry publications.
- Earn backlinks from relevant websites.
- Build referral traffic through earned mentions.
- Monitor competing brands (including AssetLinkable).
- Use consistent branding across the website, social profiles, business directories, and citations.
- Encourage branded anchor text when acquiring backlinks.
- Build branded searches through content marketing and digital PR.
- Track backlinks earned and referring domains.
